BASIC OPERATING SYSTEM WITH PROCESS AND MEMORY MANAGEMENT

What is an Operating System?

Software that manages hardware and software resources.

Handles resource allocation, process scheduling, and I/O.

Why Study OS?

Foundation for advanced computer science concepts.

Open-source development fosters innovation and learning.

Problem Statement: SDGs 4 & 9

SDG 4 - Quality Education

OS knowledge is limited, impacting CS education quality.

SDG 9 - Innovation

Lack of OS skills restricts industry innovation and infrastructure.

Our Goal

Create accessible, practical OS tools for hands-on learning.

Process System

Proposed Solution: OS Features

Process Management

Create, schedule, and terminate processes effectively.

Memory Management

Allocate and deallocate memory with virtual memory support.

Command Line Interface

Interactive user commands for system control.

Modular Design

Expandable and maintainable OS architecture.

Methodology: Development Stack

C++ Language

System-level programming for performance and control.

Linux Terminal

Robust development environment for OS components.

Modular Development

Organized code structure enabling flexibility and updates.

Dynamic Memory

Efficient resource use via malloc and free functions.

Games and utilities enhance interaction and testing.

Game and Utility Development

Tower of Hanoi

A classic puzzle challenging your problem-solving skills with recursive moves.

Tic Tac Toe

Simple yet strategic grid game for two players aiming for a winning line.

Hangman

Guess the hidden word before the stick figure is fully drawn!

Number Guessing

Test your luck and logic by guessing the secret number in few attempts.

Calculator

Perform basic arithmetic operations easily and quickly.

Calendar

Organize your days and plan events with an interactive date tracker.

Clock

Keep track of time with a simple and accurate digital clock display.

Notepad

A handy utility to jot down notes, ideas, and reminders anytime.

Results Achieved: Core Functionality

Process Control

Implemented process creation and termination using `fork()` and `exit()`.

Command Support

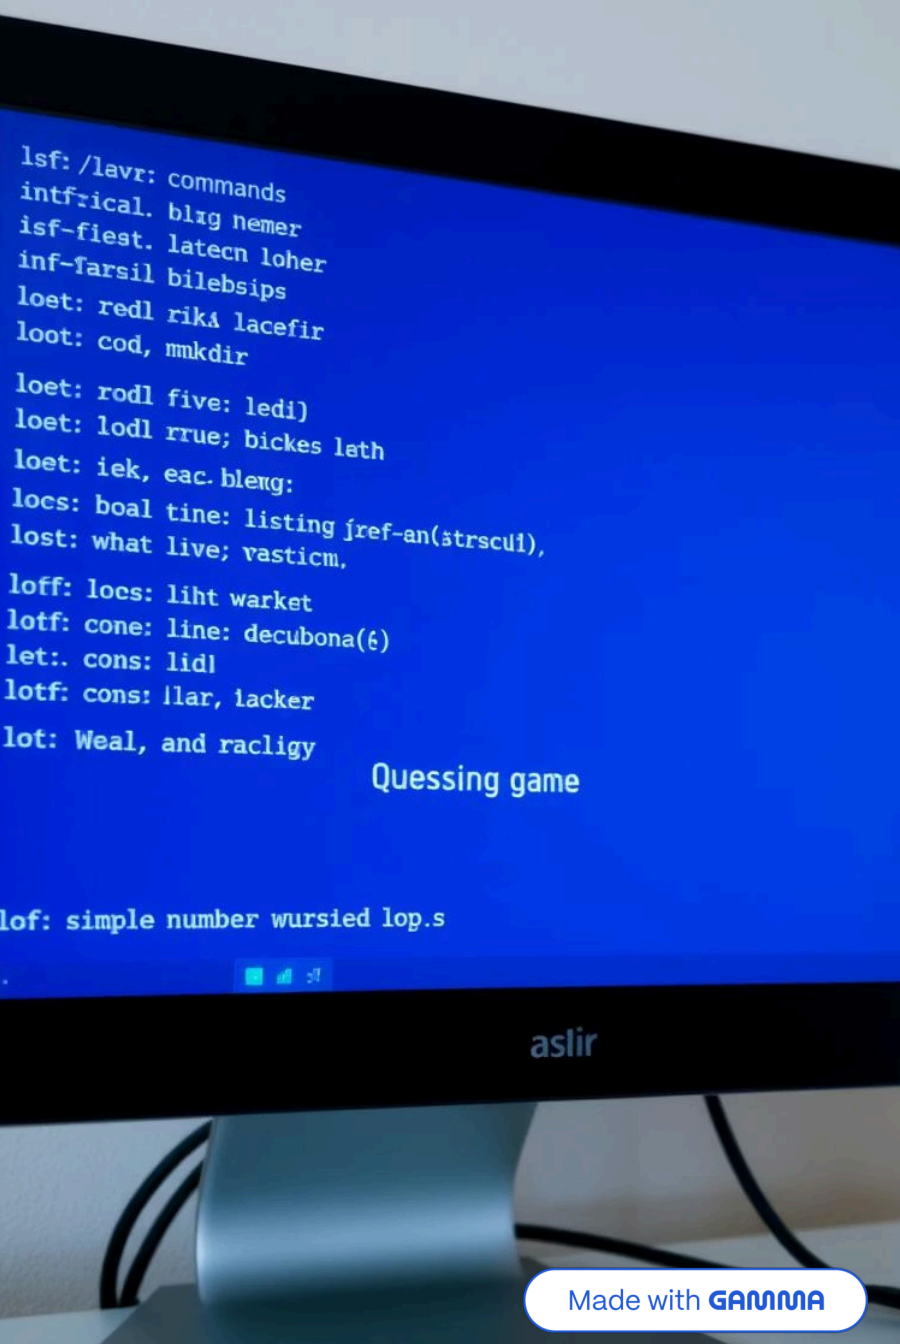

CLI runs essential commands: `ls`, `cd`, `mkdir`, `rm`.

Memory Allocation

Managed memory within a 1MB limit via `malloc()` and `free()`.

Interactive Apps

Developed proof-of-concept games like Guess the Number.

```
lsf: /lavr: commands  
intfrical. blig nemer  
isf-fiest. latecn loher  
inf-farsil bilebsips  
loet: redl rika lacefir  
loot: cod, mkdir  
  
loet: rodl five: ledi)  
loet: lodl rrue; bickes lath  
loet: iek, eac. bleng:  
locs: boal tine: listing jref-an(ätrscul),  
lost: what live; vasticm,  
  
loff: locs: liht warket  
lotf: cone: line: decubona(é)  
let.: cons: lidl  
lotf: cons: llar, lacker  
lot: Weal, and racligy
```

Quessing game

```
lof: simple number wursied lop.s
```

Discussion & Conclusion

Successes

Hands-on OS learning made OS concepts accessible to beginners.

Challenges Solved

Simplified complex OS topics with modular, interactive design.

Future Work

Plan to add multithreading, GUI, and advanced memory features.

Impact

Potential integration into computer science curricula worldwide.

Thank You

We sincerely appreciate your time and interest in exploring our project.

Your support inspires us to continue innovating and striving for excellence.
